MID-II IMPORTANT QUESTIONS 26-27 A.Y

COMPUTER NETWORKS

UNIT-III: 2 Marks QUESTIONS

1. What is random access in the data link layer?

2.Define ALOHA.

3.What is CSMA?

4.Differentiate between CSMA/CD and CSMA/CA.

5.What is channelization? Name the channelization techniques.

6.Briefly Explain the core difference between random access and controlled access protocols?

UNIT-III: 5 MARKS QUESTIONS

1. Explain the working of ALOHA and discuss its basic operation.

2.Explain CSMA, CSMA/CD and CSMA/CA with suitable examples.

3.Explain controlled access techniques: Reservation, Polling and Token Passing.

4.Explain Standard Ethernet, Fast Ethernet (100 Mbps)?

5. Explain Frequency Division Multiple Access (FDMA)?

UNIT-IV: 2 Marks QUESTIONS

1. Explain the working of the shortest path routing algorithm?

2. What is the count-to-infinity problem in distance vector routing?

3. Define a subnet.

4. List the services provided by the network layer to the transport layer.

5.What is Backpropagation Through Time?

6.What is a convolution operation?

UNIT-IV: 5 MARKS QUESTIONS

1. What is flooding in the context of network routing? What are the advantages and disadvantages of flooding?

2. Explain the design issues in the network layer.

3. Explain the Distance vector routing algorithms with example.

4.Explain the IPv6 header format in detail.

5.Explain methods to connect networks.

6. Explain Leaky bucket algorithm with example?

7. Explain any two Approaches which are followed for Congestion control in a computer network?

8. Explain the IPv4 header format and addressing schemes including classful addressing, CIDR, and subnetting.

9. Discuss various routing algorithms used in the Network Layer, such as shortest path, distance vector, and link state. Explain their working principles and compare their advantages.

UNIT-V: 2 Marks QUESTIONS

1. Differentiate between connection-oriented and connectionless transport protocols?

2. Explain the structure of a UDP segment?

3. What is the role of the transport layer in the OSI model?

4.Differentiate between local and remote logging.

5. Name two services provided by the UDP protocol.

6.Define TELNET in the context of the Application Layer.

UNIT-V: 5 Marks QUESTIONS

1. How does TCP ensure reliable data transmission? Explain.

2. Explain Domain Name System(DNS)?

3. Describe client server communication and HTTP request message format?

4. Explain different services provided by Transport layer?

5. List five differences between UDP and TCP.

6. Explain the Transmission Control Protocol.

7. Explain HTTP protocol in detail.

8. Explain the Domain Name System.

9. Describe the TELNET protocol and discuss the difference between local and remote login in network communication

10. Discuss the architecture of the World Wide Web and explain how HTTP functions as an application layer protocol. Include key features and typical request/response communication.

****

ALL THE BEST
